

196. Delete Duplicate Emails

Easy  Topics  Companies

[SQL Schema >](#) [Pandas Schema >](#)

Table: `Person`

+-----+-----+	
Column Name	Type
+-----+-----+	
id	int
email	varchar
+-----+-----+	

`id` is the primary key (column with unique values) for this table.

Each row of this table contains an email. The emails will not contain uppercase letters.

Write a solution to **delete** all duplicate emails, keeping only one unique email with the smallest `id`.

For SQL users, please note that you are supposed to write a `DELETE` statement and not a `SELECT` one.

For Pandas users, please note that you are supposed to modify `Person` in place.

After running your script, the answer shown is the `Person` table. The driver will first compile and run your piece of code and then show the `Person` table. The final order of the `Person` table **does not matter**.

The result format is in the following example.

Example 1:

Input:

Person table:

+----+-----+	
id	email
+----+-----+	
1	john@example.com
2	bob@example.com
3	john@example.com
+----+-----+	

Output:

+----+-----+	
id	email
+----+-----+	
1	john@example.com
2	bob@example.com
+----+-----+	

Explanation: `john@example.com` is repeated two times. We keep the row with the smallest `Id` = 1.
