

Given two strings `s` and `t`, return `true` if `t` is an anagram of `s`, and `false` otherwise.

Example 1:

Input: `s = "anagram", t = "nagaram"`

Output: `true`

Example 2:

Input: `s = "rat", t = "car"`

Output: `false`

Constraints:

- `1 <= s.length, t.length <= 5 * 104`
- `s` and `t` consist of lowercase English letters.

Follow up: What if the inputs contain Unicode characters? How would you adapt your solution to such a case?
