

Table: Project

Column Name	Type
project_id	int
employee_id	int

(project\_id, employee\_id) is the primary key of this table.  
employee\_id is a foreign key to Employee table.  
Each row of this table indicates that the employee with employee\_id is working on the project with project\_id.

Table: Employee

Column Name	Type
employee_id	int
name	varchar
experience_years	int

employee\_id is the primary key of this table. It's guaranteed that experience\_years is not NULL.  
Each row of this table contains information about one employee.

Write an SQL query that reports the **average** experience years of all the employees for each project, **rounded to 2 digits**.  
Return the result table in **any order**.  
The query result format is in the following example.

Example 1:

**Input:**

Project table:

project_id	employee_id
1	1
1	2
1	3
2	1
2	4

Employee table:

employee_id	name	experience_years
1	Khaled	3
2	Ali	2
3	John	1
4	Doe	2

**Output:**

project_id	average_years
------------	---------------

1	2.00	
2	2.50	

+-----+-----+

**Explanation:** The average experience years for the first project is  $(3 + 2 + 1) / 3 = 2.00$  and for the second project is  $(3 + 2) / 2 = 2.50$
