

## 344. Reverse String

Easy    Topics    Companies    Hint

Write a function that reverses a string. The input string is given as an array of characters `s`.

You must do this by modifying the input array [in-place](#) with `O(1)` extra memory.

### Example 1:

**Input:** `s = ["h","e","l","l","o"]`

**Output:** `["o","l","l","e","h"]`

### Example 2:

**Input:** `s = ["H","a","n","n","a","h"]`

**Output:** `["h","a","n","n","a","H"]`

### Constraints:

- `1 <= s.length <= 105`
- `s[i]` is a [printable ascii character](#).
