

Table: Salary

+-----+-----+	
Column Name	Type
+-----+-----+	
id	int
name	varchar
sex	ENUM
salary	int
+-----+-----+	

id is the primary key for this table.

The sex column is ENUM value of type ('m', 'f').

The table contains information about an employee.

Write an SQL query to swap all 'f' and 'm' values (i.e., change all 'f' values to 'm' and vice versa) with a **single update statement** and no intermediate temporary tables.

Note that you must write a single update statement, **do not** write any select statement for this problem.

The query result format is in the following example.

Example 1:

Input:

Salary table:

+----+-----+-----+-----+			
id	name	sex	salary
+----+-----+-----+-----+			
1	A	m	2500
2	B	f	1500
3	C	m	5500
4	D	f	500
+----+-----+-----+-----+			

Output:

+----+-----+-----+-----+			
id	name	sex	salary
+----+-----+-----+-----+			
1	A	f	2500
2	B	m	1500
3	C	f	5500
4	D	m	500
+----+-----+-----+-----+			

Explanation:

(1, A) and (3, C) were changed from 'm' to 'f'.

(2, B) and (4, D) were changed from 'f' to 'm'.
